

How We Work Together (Terms of Cooperation)

Clear principles for a partnership built on trust.

1. The Blueprint (With a Human Touch)

We rely on the **Technical Specification** to keep the project on track and within budget. However, I am a partner, not a robot.

- **The Rule:** Major changes that alter the logic or design (e.g., "Let's add a new page") are new tasks.
- **The Exception:** Small, reasonable tweaks that improve the user experience (e.g., "Can we make this text bold?" or "Let's swap these two buttons") are **on the house**. I want the product to be perfect just as much as you do.

2. My "High Confidence" Deadline Guarantee

I take timelines seriously.

- **The Promise:** If I miss the final deadline due to *my own fault*, I will apply a **15% discount** for every week of delay.
- **The Condition (Two-Way Street):** This guarantee applies when I have everything I need. If the delay is caused by waiting for your feedback, assets, or credentials, the deadline naturally shifts. I can't build without bricks!

3. Revisions vs. Polish

Perfection is a process. For every delivered milestone, we have **2 Rounds of Revisions**.

- **What this covers:** Adjusting logic, design polish, and making sure everything works as envisioned.
- **The Goal:** To reach a "Definition of Done" efficiently without getting stuck in endless feedback loops.

4. 30-Day "No-Headache" Warranty

I take full responsibility for my work.

- **My Fault = Free Fix:** If a bug is caused by my code, my oversight, or my logic error -I fix it **immediately and for free**. No questions asked. This applies for 30 days after delivery.

- **External Factors:** Issues caused by 3rd-party updates (e.g., hosting changes, API updates) or code modifications by others are separate support tasks.

5. Stress-Free Deployment (You Own Everything)

Zero Vendor Lock-in. I handle the entire technical setup - you don't need to touch the terminal.

- **The Process:** I will guide you to create an account on the hosting platform (e.g., Vercel, VPS) so that **you** are the legal owner of the account and billing.
- **My Job:** Once you give me access, I handle the rest: server configuration, domain connection, SSL, and deployment.
- **Result:** You get a turnkey, working product. I hand over the code and keys, and you retain 100% ownership.

6. Communication

I am based in **Seoul (GMT+9)** and work asynchronously to maximize focus.

- **Reliability:** I reply to all messages within **24 hours**.
 - **Transparency:** You won't have to chase me. I provide proactive updates so you always know the status of your project.
-

7. Input Materials (Design & Content)

To build a high-quality product, I need high-quality inputs.

- **Design:** I am a Software Architect, not a Graphic Designer. You are responsible for providing the design mockup (Figma, Photoshop, or Sketch). My job is to turn that design into pixel-perfect, functioning code.
 - *Note: If you don't have a design, I can build a clean, structural UI using modern best practices (Shadcn/UI), but it won't be a custom artistic design.*
- **Content:** You provide the text, logos, and images. If they aren't ready, I will use placeholders (Lorem Ipsum) to keep development moving. This ensures we don't delay the technical launch waiting for a copywriter.

8. The Fine Print (Important Details)

Project Pausing (The "Ghost" Clause) I schedule my time specifically for you.

- If you become unresponsive for more than **10 business days**, the project is considered "Paused."
- To restart a paused project, we will need to schedule a new timeline based on my current availability.

Portfolio Rights I am proud of what we build together.

- I reserve the right to display the finished project in my portfolio (excluding any sensitive data).
- If you require strict confidentiality (NDA), please let me know **before** we start.

Third-Party Costs My fee covers development. It does not cover ongoing costs for:

- Hosting (e.g., Vercel, AWS).
- Domain names.
- Paid APIs or Plugins.
- *I will always advise you on these costs upfront.*
